Focus Group Highlights Practical Green Skills

As coordinator of the Erasmus+ Green4ADU project, Wittenborg University of Applied Sciences brought together educators and practitioners to discuss how sustainability education can better support adult learners. Participants highlighted the importance of practical, job-related green skills and stronger links between training and employment opportunities.

The discussion also explored interactive learning methods, behavioural change, and the role of institutions in supporting the green transition. Insights gathered will contribute to the project's final recommendations and learning resources.

Green4ADU Workshop Promotes Green Learning in The Hague

As coordinator of the Erasmus+ Green4ADU project, Wittenborg University of Applied Sciences, together with Vadercentrum ADAM, hosted a workshop in The Hague focused on sustainability, wellbeing and social inclusion.

Participants engaged in hands-on activities, including energy-saving challenges, digital learning tools and creative recycling exercises, while exchanging ideas on sustainability and community engagement. The workshop highlighted the value of collaboration between educational and community organisations in delivering practical and inclusive green learning opportunities.

Green4ADU Webinar Links Green Skills and Sustainable Careers

Wittenborg University of Applied Sciences, coordinator of the Erasmus+ Green4ADU project, hosted an international webinar showcasing the project's e-learning platform and educational toolkit for adult learners and educators.

Expert speakers shared perspectives on marine biodiversity, ocean literacy and energy inequality, underlining the importance of an inclusive green transition. The webinar also connected with Wittenborg's Project Week on Green Skills & Sustainable Careers, highlighting the growing importance of sustainability competences in today's labour market.

Green4ADU Attracts Interest from Policy Stakeholders in Italy

Following the dissemination of Green4ADU's policy recommendations, project partner CEIPES received an invitation from the Palermo City Council to present the project's results. The recommendations will also be shared with the Centre for Sustainability and Ecological Transition (CSTE) at the University of Palermo and the Milan Urban Food Policy Pact, supporting the wider uptake and visibility of Green4ADU outcomes.

Green4Adu Stakeholder Event in Bremen

How can vocational education prepare young people for the green jobs of tomorrow? This question is at the heart of Green4Adu, an Erasmus+ project bringing together partners from across Europe to explore Green Skills and the transition towards a more sustainable working world.

On 5 October 2026, Interchange hosted the Green4Adu Stakeholder Event at the BSGAV in Bremen, bringing together stakeholders from education, business and beyond under the motto "FIT FÜR DIE GRÜNE ARBEITSWELT".

Trainees and teachers from the fields of Marketing/Communication and Tourism at BSGAV have contributed their perspectives through workshops and focus groups. Together, they explored Green Skills, sustainability and the challenges and opportunities of a changing labour market. Their insights have contributed to recommendations for stakeholders in education, business and policy.

At the event, the trainees will present their project work, followed by a Q&A session and opportunities for discussion and exchange. We look forward to hearing different perspectives and discussing how we can collectively support the transition towards a greener working world.

GreenVET Expert to Contribute to Green4ADU International Multiplier Event

The Green4ADU partnership is pleased to welcome Silke Becker (Wisamar) as a speaker at the project's Final International Multiplier Event.

Drawing on her experience in the Erasmus+ GreenVET Pathway project, Silke will present innovative approaches to sustainability in vocational education and training. GreenVET promotes a Whole Institution Approach, embedding sustainability across teaching, school management, partnerships and learning environments.

Her participation will provide valuable insights and inspiration for Green4ADU stakeholders, highlighting practical strategies that can support green skills development and sustainable learning across Europe.

BB&R Focus Group Explores Green Skills Challenges

Green4ADU partner BB&R recently organised a focus group examining key barriers to green skills development. Participants discussed the need for more training in green competences, stronger links to the labour market, and practical learning approaches. The conversation also highlighted concerns that sustainability priorities may be overshadowed by the rapid rise of AI and emerging technologies. These findings will help inform Green4ADU's future recommendations and training resources.

Green4ADU Local Event Engages Stakeholders in Thessaloniki

OECON GROUP welcomed over 40 participants to the Green4ADU Local Multiplier Event in Thessaloniki. Educators, learners and local stakeholders came together to discover the project's results, exchange ideas on sustainability and green skills, and discuss the role of lifelong learning in supporting a greener future. The event successfully promoted dialogue, collaboration and the wider dissemination of Green4ADU outcomes.
